Progressive Lenses

KODAK Progressive Lenses are an excellent choice for everyday wear. Clear viewing areas work together for a natural-feeling wearing experience while maintaining great individual performance.

OUTSTANDING DESIGN

KODAK Precise® Lens is the first progressive design created with Signet Armorlite's proprietary Vision First Design™ Technology. This technology reverses the traditional design methodology of calculating the lens surface and measuring results. Instead, designers start by defining the optical properties that constitute superb vision and let those calculations determine the corresponding lens surface. This approach gives direct control of the curvature of the lens.

PREMIUM PERFORMANCE

The result, continuous power progression across the entire lens and smooth transition between viewing areas for easier patient adaptation. Plus, the perfectly placed reading, intermediate and distance areas on the lens reduce swim effects. In fact, some wearers have compared their first KODAK Precise Progressive Lens experience to that of a single vision lens.

The additional binocular characteristics found in KODAK Precise Lenses improve the visual balance of peripheral vision in both eyes. Wearers enjoy enhanced peripheral line integrity without experiencing a momentary blurry sensation.

For smaller frames, KODAK Precise Short Lenses offer the same technology and award-winning design in a minimum 13mm fitting height option.

KODAK Concise® Progressive Lens is another option to fit small frames with a progressive lens design. This short-corridor lens design provides a spacious clear distance area, wide corridor and large reading area for fashion frames. Fitting heights range between 14mm and 17mm.

GREAT SELECTION

KODAK Progressive Lenses are available in a variety of lens materials, including:

- Transitions® and PhotoViews™ photochromic lenses
- Polarized lenses

KODAK Progressive Lenses are compatible with all major anti-reflective coatings.
